

Small school. Big difference.

Hankey IB
ACADEMY

tombakerphotograph

IB learners are encouraged to take action, locally and abroad. This helps our students develop skills like cooperation, creative thinking, problem solving, conflict resolution, and critical thinking.

Learn by doing & experiencing

International Baccalaureate (IB) is an approach to teaching and learning that actively engages students while encouraging them to think deeply, and take action in their own lives. Through the program, students become internationally-minded thinkers and inquirers who ask questions and seek answers with a global perspective. The IB program fosters a love of learning by nurturing students' natural curiosity. The curriculum is a rigorous, inquiry-based program, empowering students to take action to create a better, more peaceful world.

Become a life-long learner

Carl Hankey K-8 International Baccalaureate World School develops active, compassionate, internationally-minded, life-long learners. Students work collaboratively with teachers and others to plan, present, and assess their own learning. Throughout the K-8 application of this design process, Hankey IB students develop a growth mindset, and they transition to high school with the confidence of being agents of change, able to persist and bounce back when confronted with challenges.

See things from different perspectives
